DETAILED ACTION

Response to Amendment

1. The amendment received on 12/28/2004 has been reviewed and considered with the following results:

As to the objection to the drawings, Applicant's revision of the drawings has overcome the objection, as such; the objection has been withdrawn.

As to the prior art rejections to the claims, Applicant's amendment has overcome the prior art rejections, as such; the prior art rejections have been withdrawn. The case is found to be in allowance condition.

REASON FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose or fairly suggest a clock skew tolerant clocking scheme (as shown in Fig. 6) and a method of use thereof, as recited in claims 1 and 11, having a very specific limitation as a first pulse signal (501 IN INSTANT Fig. 5) comprising a plurality of first pulses (511, 513, 515), each of the first pulses of the plurality of first pulses comprising a first pulse rising edge and a first pulse falling edge and a first pulse width (505) between the first pulse rising edge and the first pulse falling edge, the first pulse signal being generated by a first local pulse generator (602), the first pulse signal being derived from the clock signal (CLKe 203) such that each of the first pulses of the plurality of first pulses corresponds to one of the clock pulses of the plurality of clock pulses and each of the first pulse rising edges of the first pulses are generated by a corresponding clock pulse rising edge of the corresponding one of the

Application/Control Number: 10/631,952 Page 3

Art Unit: 2816

plurality of clock pulses, the first pulse width being less than fifty percent of the clock pulse width; a second pulse signal (503) comprising a plurality of second pulses (521, 523, 525), each of the second pulses of the plurality of second pulses comprising a second pulse rising edge and a second pulse falling edge and a second pulse width (507) between the second pulse rising edge and the second pulse falling edge, the second pulse signal being generated by a second local pulse generator (604), the second pulse signal being derived from the clock signal such that each of the second pulses of the plurality of second pulses corresponds to one of the clock pulses of the plurality of clock pulses and each of the second pulse rising edges of the second pulses are generated by a corresponding clock pulse falling edge of the corresponding one of the plurality of clock pulses, the second pulse width being less than fifty percent of the clock pulse width; and being configured in combination with the rest of the limitations of the base claim and any intervening claims.

Claims 21 and 31-36 are allowed for similar reasons; note the above discussion with regard to claims 1 and 11.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai L. Nguyen whose telephone number is 571-272-1747 and

Application/Control Number: 10/631,952

Art Unit: 2816

Right Fax number is 571-273-1747. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan can be reached on 571-272-1740. The official fax phone number for the organization where this application or proceeding is 703-872-9306.
